DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, are drawn to a method for interpolating a pixel value for an interlaced video stream, classified in class 345, subclass 606.
 - II. Claims 12-24, are drawn to a method for de-interlacing an interlaced video signal, applying a pure 2D de-interlacing algorithm or a mixed 2D-3D de-interlacing algorithm based on specific pixel states, classified in class 348, subclass 448.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention I does not require the particulars of the determining of whether a blank pixel location is associated with a moving or still state of Invention II. The subcombination has separate utility such as converting types of video from one format to another (i.e., interlaced to progressive video formats).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
